

Boat Monitor with Bilge Sentry

BMBS700

Know your boat is OK when you are away!

With Sensor Marine installed, you can check on your boat anytime from your cellphone. Data is continuously uploaded to the cloud and SMS alerts are sent instantly if there is a problem.

The Boat Monitor will run 24/7/365 - *without depleting your boat batteries.*

Battery

Voltage is monitored and alerts sent if the starter and/or house battery drops to critically low power levels.

GPS position

The integrated GPS antenna will give you real-time information about your boat's position.

GeoFence

Know if your boat moves from where you left it. This fully automatic function activates after the boat has been still for over 15 minutes.

TripLog

Trips are tracked automatically - no need to press record. See detailed information with speed, course, impact and location.

Impact

An integrated accelerometer shows G-force. Know when your boat has experienced an impact or abuse.

Bilge Pump

Track bilge pump activity. Alerts will be sent anytime the bilge pump operates.

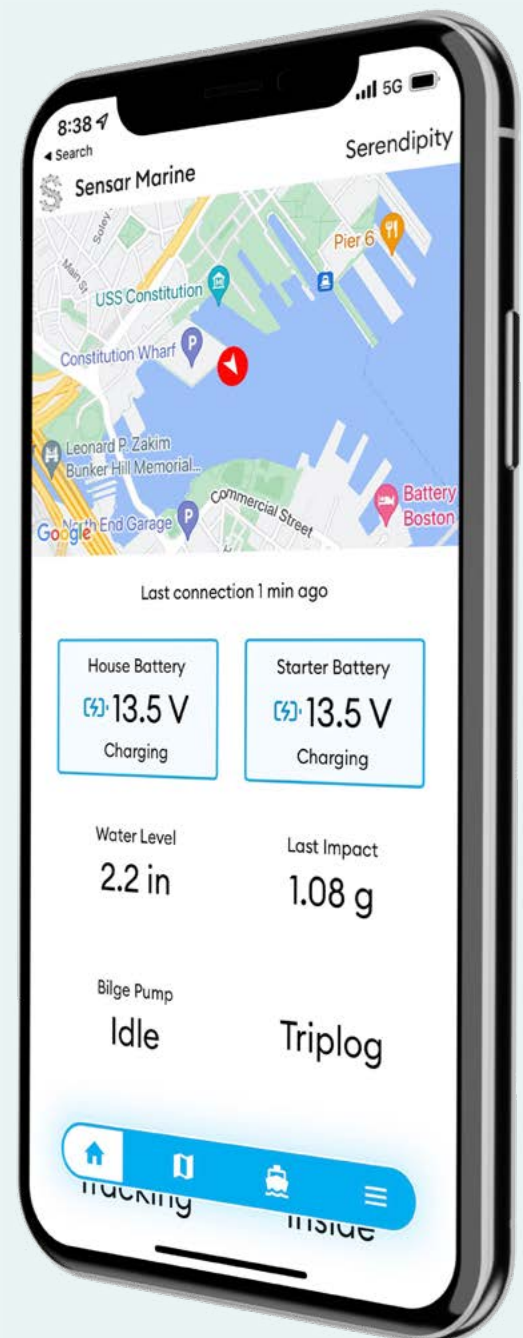

Water Level in Bilge

The innovative solid-state Bilge Sentry measures the actual depth of water in your bilge and alerts you of rising water.

Temperature in Bilge

The Bilge Sentry includes two integral temperature sensors (water/air) and will alert you when your boat is at risk of freezing.

Worldwide Service

Integrated SIM provides unlimited, carrier-independent, global 4G data uploads to the Sensor Marine cloud & SMS alerts to your cellphone.

Always On and Monitoring

Even when your boat's battery switch is off, the Boat Monitor stays on. Perfect for boats on moorings & trailers, the device's massive internal battery will cover weeks of operation and automatically charge when surplus boat power is next available.

IPx7 Waterproof

Proven in the harsh North Sea, the Boat Monitor and Bilge Sentry are fully waterproof and hardened for marine use. Not just for yachts... works great in boats of all sizes!
